

# We deliver the solution

Certificate in accordance  
with EN 1090-1

Execution class EXC4  
according to EN  
1190-1

Welding qualifica-  
tions according to  
EN 1190-1

Quality requirements  
according to DIN EN  
ISO 3834-2

## Engineering

You tell us your particular application and we'll take care of the rest. If no standard solutions can be implemented, we will design an individual solution that will enable you to use the crane installation at your site. The steel structures are produced in compliance with applicable standards and regulations.

## Manufacturing

Every aspect is right on the mark. The manufacture of the support structures is performed exclusively by qualified employees. The welding work is carried out by certified welders. ABUS holds the manufacturer's qualifications for welding of steel structures. The delivery is made with CE labelling in compliance with EN 1090-1.

## Delivery

With ABUS you get everything from a single source. Crane systems and support structures are manufactured in parallel and can thus be provided at the same time in one shipment. You are thus spared any additional coordination effort.

## Installation

For the installation, place your trust in our experienced qualified engineers. The installation is preceded by a technical clarification process of both crane and support structure, to ensure that everything fits as it should and the installation time is as brief as possible.
